canary

Meet Canary.

|			
1	Tap to record	**5**	Environmental monitors
2	HD camera	**6**	Secure setup cable
3	Motion detector	**7**	Micro-USB cable
4	Microphone	**8**	AC power adapter

Find the perfect place.

Canary should sit on a flat surface facing a central, high-traffic area of your home so it sees everyone coming and going. Once you pick a spot for it, download the app to get started. **http://canary.is/download**

See what's important.

Through motion-activated recording, Canary captures live video and audio of important events in your home and intelligently filters out footage when all is calm.

Forget the keypad.

Canary senses when you come and go and automatically changes modes so you don't have to. You'll only get notifications when you're away.

Record on demand.

Canary watches out for bad situations, but can capture the good stuff, too. If you're home and want Canary to record something memorable, just tap the top of the device.

Share with your family.

Canary works best when everyone who lives together is connected to it. Share access with your family members or roommates using the Canary app.

Invite your friends.

Use the Canary app to invite trusted friends or neighbors to be your backups if you miss a notification. Rest easy knowing you'll always have someone looking out for you.
